## What is it?

The National System of Researchers was created by [Presidential Agreement](#) published in the Official Journal of the Federation on July 26, 1984, to recognize the work of people dedicated to producing scientific knowledge and technology. The award is given through peer review and is to grant the appointment of National Enquirer. This award symbolizes the quality and prestige of the scientific contributions appointment Parallel to provide economic stimulus whose amount varies with the level assigned

## Target

The SNI is to promote and strengthen, through the evaluation, the quality of scientific and technological research and innovation that occurs in the country. The system contributes to the formation and consolidation of researchers with scientific and technical knowledge at the highest level as a key element to increase the culture, productivity, competitiveness and social welfare.

## What are the benefits?

The National System of Researchers, through its members, is a group in which are represented all scientific disciplines that are practiced in the country and covers a vast majority of higher education institutions and research institutes and centers that operate in Mexico. In this sense contributes to scientific activity develops in the best possible way throughout the territory and to research groups are installed with high academic standards in all states.

To do its work the National Researchers System provides reliable and valid criteria to evaluate research activities carried out by academics and technologists. These criteria are expressed in the following Regulations. In this legal system defines its organization and operation, eligibility conditions, the guidelines are followed to name the consultative commission and how they carry out their tasks. Finally, including the benefits that come with membership in the National System of Researchers and periods of tenure of appointment.
