

Gas Certification Institute

March 30 – April 3, 2026; Pittsburgh, PA

Hosted at:

Robert Morris University

Located just 10 minutes from the Pittsburgh International Airport, with many hotels within 1 mile of campus

Gas Measurement Fundamentals & EFM Best Practices

Over the course of a week, you'll learn about all the basics that are essential for proficient and accurate measurement. You will also get hands-on experience in following industry standards and understanding how deviation can induce measurement error.

- Natural gas chemistry
- Gas laws and physical behavior
- Units of measurement
- Flow measurement principles
- Flow conditioning principles
- Volume determination measurement devices
- Orifice meter run and plate inspections
- Witnessing meter test inspections
- Industry standards and contracts
- Gas sampling and analysis
- Techniques for gas spot sampling
- Fundamentals of gas chromatography
- Flow computers and their applications
